<b>Winter Survival</b>	<i>2.0</i>	<b>Phytophthora Root Rot</b>	<i>HR</i>	<b>Verticilium Wilt</b>	<i>HR</i>
<b>Bacterial Wilt</b>	<i>HR</i>				

## PRODUCT DETAILS

Flagship 2.0 Alfalfa provides a combination of top production with high resistance to Aphanomyces root rot Race II (APH II). This leading alfalfa will please growers by its resilience, high yield potential, forage quality and dark green color. Strengths of Flagship 2.0 Alfalfa include strong offense with excellent defense against all the major alfalfa diseases – including APH II. Place this alfalfa on fields where history has shown difficulty in establishing alfalfa because of pressure from APH II and wet springtime weather. It will even shine under ideal conditions on good ground without heavy disease pressure. This is an all-around solid alfalfa.
